IM&R Economic and Market Review Q2 2018

Steve Mayhew, CFA

Economic Review

"Great shape" is how Fed Chair Jerome Powell describes the state of the U.S. economy. Underlying fundamentals continue to show strength and indicators point in a positive direction. Still, tariff talk remains at the forefront as the economy enters the third quarter.

As expected, the Federal Reserve opted to increase the fed funds rate by 25 basis points to an expected range of 1.75 to 2.00 percent. In addition to the two rate hikes already in the books in 2018, forecasters anticipate there may be two more before the year is out on the strength of the U.S. economy.

U.S. economic growth increased at an annual rate of 2.0% in the first quarter according to the Bureau of Economic Analysis real gross domestic product (GDP) report. GDP rose 2.9% in the prior quarter. The Atlanta Fed GDPNow model estimate for the second quarter of 2018 currently stands at 3.8%.

The Conference Board Leading Economic Index (LEI) rose again in the latest reading, and still points to solid growth, but the current trend, which is moderating, indicates that economic activity is not likely to accelerate.

The Census Bureau report on new residential construction showed continued strength in housing starts with permits up 9.1% from a year earlier, but completions were mixed with completions of multifamily housing down 14%.

The Institute for Supply Management (ISM) said its index of national factory activity jumped in May indicating a continued expansion in manufacturing which accounts for about 12 percent of the U.S. economy. According to the survey, demand remains robust, but the nation's employment resources and supply chains continue to struggle with respondents overwhelmingly concerned about how tariff-related activity is and will continue to affect their business.

Consumer sentiment has been virtually unchanged for the past three months according to the University of Michigan Surveys of Consumers. The persistent strength has been due to favorable assessments of jobs and incomes. For the year ahead, consumers still anticipated that the economy would produce small additional declines in the unemployment rate as well as higher wage gains. Consumers also anticipated an uptick in inflation partly due to rising energy prices and partly due to tariffs.

Financial Markets Review: Domestic Stock Market

It was a bumpy ride in the second quarter as the markets struggled to bounce back from the February correction. In the end the S&P posted a positive return of 2.93% (excluding dividends) closing at 2,718.37. Among other major averages, the Dow Jones Industrial average closed the quarter up 0.70% to 24,271.41, but remains only 2.7% above its March 23, 2018 correction low point. The technology heavy NASDAQ Composite continued to shine in the second quarter finishing up 6.33% at 7,510.30.

The top sectors in the S&P 500 in the second quarter were energy (+13.48%), consumer discretionary (+8.17%) and information technology (+7.09%). Laggards included industrials (-3.18%), financials (-3.16%), and telecom services (-0.94%).

Among market capitalizations and styles, small beat large and growth outperformed value, in general, for the quarter and year-to-date.

In June, General Electric, the last original member of the Dow Jones industrial average, was dropped from the blue-chip index and replaced by the Walgreens Boots Alliance drugstore chain. The top-performing stocks in the Dow for the second quarter included Nike (+19.93%), UnitedHealth Group (+14.64%) and Merck (+11.44%). Detractors from the Dow's performance included Goldman Sachs, (-12.42%), Travelers (-11.90%) and 3M (-10.39%).

The best performing S&P industry groups for the quarter were footwear (+17.7%), exploration & production (+16.8%), and specialty retailers (+16.7%). The worst performers were electronic office equipment (-21.3%) renewable energy equipment (-20.5%) and tobacco (-14.2%).

Looking ahead, the economy remains on solid footing against a backdrop of positive global economic growth combined with strong earnings momentum. Economic and earnings fundamentals remain sound, job growth is strong and consumer confidence is high.

Geopolitical risks that could put a damper on the markets include events ranging from global tariffs and retaliations to the North Korea conflict to Gulf tensions to the South China Sea conflict.

Mid-term election year stock market performance is historically bad and we may see more weakness through the summer months. Nevertheless, indicators continue to point in the right direction, the economic expansion continues and with no recession in sight, we remain optimistic with a view of the markets ending the year higher.

	Total Returns (06/30/18)			Annualized Returns (06/30/18)		
Category/Style	2nd Quarter	Year-to-Date	One Year	Three Years	Five Years	Ten Years
S&P 500	3.43	2.65	14.37	11.93	13.42	10.17
S&P Midcap 400	4.29	3.49	13.50	10.89	12.69	10.78
S&P Small Cap 600	8.77	9.39	20.50	13.84	14.60	12.25
Russell 1000 Large Cap Growth	5.76	7.25	22.51	14.98	16.36	11.83
Russell 1000 Large Cap Value	1.18	-1.69	6.77	8.26	10.34	8.49
Russell 2000 Small Cap Growth	7.23	9.70	21.86	10.60	13.65	11.24
Russell 2000 Small Cap Value	8.30	5.44	13.10	11.22	11.18	9.88

International Stock Markets

The global expansion carries on but geopolitical risks abound from trade protectionism threating continued global growth to the risk of European fragmentation.

The MSCI EAFE Index of developed markets diverged from the U.S. markets in the second quarter sliding 1.24%. Emerging and frontier markets fared worse based on a strengthening dollar and trade war fears. Troubles in Turkey and Brazil drove emerging markets down 7.96% while Argentina and Vietnam woes plunged frontier markets 15.19% according to their respective MSCI indexes.

In the Eurozone, the Euro Stoxx Index edged 0.78% higher to 376.91 in local currency. Germany's DAX Index was up 1.73% to 12,306.00. France's CAC-40 Index gained 3.02% to 5,323.53. And the UK's London FTSE 100 Index was down a slight 0.66% to 7,636.93.

In Asia, Japan's Nikkei stock average advanced 3.96% to 22,304.5. In emerging markets, China's Shanghai Composite Index posted a double digit loss of 10.14% to 2,847.42, while India's S&P BSE Sensex index jumped 7.44% to 35,423.48.

The Americas DJ Americas index was up 2.56% for the quarter to 650.21. Brazil's Sao Paulo Bovespa Index gave back all of its first quarter gains and then some crashing 14.76% to 72,762.52. Canada's S&R/TSX composite index gained 5.92% to 16,277.73 and Mexico's S&P/BMV IPC Index advanced 3.33% for the quarter to 47,663.20.

Top performing countries for the quarter (in $U.S.) based on the S&P Global BMI (Broad Market Index) were Israel (+5.7%), Qatar (+5.6%), and Canada (+4.1%). Laggards included Argentina (-34.2%), Turkey (-26.8%) and Brazil (-26.7%).

The dollar reversed a slump against world currencies in the second quarter gaining 5.0% according to the WSJ Dollar Index. The dollar advanced 4.21% against the yen, ending the quarter at 110.73 (JPY/USD) and was 5.29% stronger versus the euro at $1.17 (USD/EUR).

World Bond Markets

The U.S. 10-year note briefly broke through the 3% barrier in May before slipping to 2.85% at quarter end. The yield curve continued to flatten with the spread between the 2-year and 10-year bond narrowing to 32 basis points at the end of the second quarter from 47 basis points in the prior quarter. Still, an imminent yield curve inversion appears unlikely.

For the quarter, the Barclays U.S. Aggregate Bond Index dipped 0.16% while the Barclays U.S. Treasury TIPS Index gained 0.77%. The Barclays Municipal Index recovered 0.87% from a first quarter loss. The average money market yield was 0.52% according to bankrate.com at month's end. Yields on foreign bonds edged lower in the second quarter, with the 10-year bond yield down 0.12% in the UK to 1.25%, off 0.03% to 2.09% in Canada and slipping by 0.18% to 0.32% in Germany. Yields remained at 0.04% in Japan.

Commodities

Commodities moved 1.56% higher second quarter to 640.94, as measured by the DJ commodity index. Among individual commodities, crude oil surged 14.18% for the quarter to $74.15. That is a 67.65% increase from a 52 week low of $44.23. Gold fell 5.41% in the second quarter to $1,251.30/troy oz. The national average price of gas according to AAA was up $0.20 for the quarter to $2.85, still well off the highest recorded average of $4.11 in July 2008.

Mutual Funds/Exchange-Traded Funds

The increasing popularity of passive investing and low cost Exchange-Traded Funds (ETFs) continues with 130 new ETF funds added to the ranks in the past 12 months, bringing the total to 1,892. $628 billion in net growth over the past year brings the total in ETF assets to $3.5 trillion as of May 2018, according to the Investment Company Institute. Mutual funds showed asset growth of 9.0% over the same period to $18.9 trillion, but witnessed a decline of 158 funds to 7,915.

MUTUAL FUNDS OVERVIEW AS OF JUNE 30, 2018

Important Definitions and Disclosures

The opinions and material presented are provided for informational purposes only. No person or system can predict the market. Neither asset allocation nor diversification guarantee a profit or protect against a loss. All investments are subject to risk, including the risk of principal loss. There is no assurance that the investment goals and process described herein will consistently lead to successful investing. Asset allocation and diversification do not eliminate the risk of experiencing investment losses. The investment return and principal value of an investment will fluctuate, and an investor's shares, when redeemed, may be worth more or less than their original cost. Funds that invest in stocks of small-cap or mid-cap companies involve additional risks. The securities of these companies may be more volatile and less liquid than the securities of larger companies. Funds that invest in international securities involve special additional risks. These risks include, but are not limited to, currency risk, political risk, and risk associated with varying accounting standards. Investment in emerging markets may accentuate these risks. Alternative strategies, including those used in mutual funds, have risks that may substantially increase the potential for loss. Bonds are subject to interest rate risk. Bonds have interest rate risk and credit risk. As interest rates rise, existing bond prices fall and can cause the value of an investment to decline. Changes in interest rates generally have a greater effect on bonds with longer maturities than on those with shorter maturities. Funds that hold bonds are subject to declines and increases in value due to general changes in interest rates. Credit risk refers to the possibility that the issuer of the bond will not be able to make principal and/or interest payments.

The information provided is not intended to be a complete analysis of every material fact with respect to any portfolio, security, or strategy and has been presented for educational purposes only. Data obtained from the sources cited is believed to be reliable and accurate at the time of compilation. Nothing contained herein should be construed as a recommendation to buy or sell any individual securities. It should not be assumed that an investment in any of the securities identified was or will be profitable.

Gross Domestic Product (GDP) is a measure of output from U.S factories and related consumption in the United States. It does not include products made by US companies in foreign markets. The **Federal Open Market Committee** (FOMC), a committee within the Federal Reserve System is charged under United States law with overseeing the nation's open market operations (i.e., the Fed's buying and selling of United States Treasury securities). The **Atlanta Fed GDPNow** estimate is a model-based projection not subject to judgmental adjustments. It is not an official forecast of the Atlanta Fed, its president, the Federal Reserve System, or the Federal Open Market Committee. **Real Gross Domestic Product** (real GDP) is a macroeconomic measure of the value of economic output adjusted for price changes (i.e., inflation or deflation). The **S&P/Case-Shiller Home Price Indices** are the leading measures of U.S. residential real estate prices, tracking changes in the value of residential real estate both nationally as well as in 20 metropolitan regions. . The **ISM Manufacturing Index** is based on surveys of more than 300 manufacturing firms by the Institute for Supply Management (ISM). The ISM Manufacturing Index monitors employment, production, inventories, new orders and supplier deliveries. A composite diffusion index monitors conditions in national manufacturing and is based on the data from these surveysThe **unemployment rate** percentage of total workforce who are unemployed and are looking for a paid job. Unemployment rate is one of the most closely watched statistics because a rising rate is seen as a sign of weakening economy that may call for cut in interest rate. A falling rate, similarly, indicates a growing economy which is usually accompanied by higher inflation rate and may call for increase in interest rates. Labor force participation rate is the percentage of working age population that is part of the labor force. It is a measure of what proportion of a country's population is employed or actively looking for employment. The index of leading economic indicators is intended to predict future economic activity. Typically, three consecutive monthly LEI changes in the same direction suggest a turning point in the economy. **Inflation** is the rise in the prices of goods and services, as happens when spending increases relative to the supply of goods on the market. Moderate inflation is a common result of economic growth. Hyperinflation, with prices rising at 100% a year or more, causes people to lose confidence in the currency and put their assets in hard assets like real estate or gold, which usually retain their value in inflationary times. **Treasury Yield Curve** is a line that plots the interest rates, at a set point in time, of bonds having equal credit quality, but differing maturity dates. The most frequently reported yield curve compares the three-month, two-year, five-year and 30-year U.S. Treasury debt. **The Conference Board Leading Economic Index® (LEI)** for the U.S. are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading, coincident, and lagging economic indexes are essentially composite averages of several individual leading, coincident, or lagging indicators. They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component – primarily because they smooth out some of the volatility of individual components. **The Michigan Consumer Sentiment Index** was created in the 1940s is conducted by the Survey Research Center and consists of at least 500 telephone interviews posed to a different cross-section of consumers in the continental U.S. each month. The survey questions consumers on their views of their own personal finances, as well as the short-term and long-term state of the U.S. economy. Each survey contains approximately 50 core questions, and each respondent is contacted again for another survey six months after completing the first one. The answers to these questions form the basis of the index. **S&P 500 Index** is an index of 500 of the largest exchange-traded stocks in the US from a broad range of industries whose collective performance mirrors the overall stock market. The **Dow Jones Industrial Average** is a widely watched index of 30 American stocks thought to represent the pulse of the American economy and markets. The **NASDAQ** is an index that tracks the cumulative results on a market capitalization basis of all stocks trading in the NASDAQ system. An investment concentrated in sectors and industries may involve greater risk and volatility than a more diversified investment. The **S&P SmallCap 600 Index** (S&P600) covers roughly the small-cap range of US stocks, using a capitalization-weighted index. The index covers roughly three percent of the total US stock market. The **S&P MidCap 400 Index** (S&P400) is a stock market index from S&P Dow Jones Indices. The index serves as a barometer for the US mid-cap equities sector and is the most widely followed mid-cap index in existence. To be included in the index, a stock must have a total market capitalization that ranges from roughly $750 million to $3.3 billion. The **Russell 1000 Index** is a capitalization-weighted price-only index which is comprised of 1000 of the largest capitalized US-domiciled companies whose common stock trade in the United States on the New York Stock Exchange, American Stock Exchange and NASDAQ which are included in the Russell 3000 Index. This large cap market-oriented Index is highly correlated with the S&P 500 Index. **Russell 2000 Index** is a market-value-weighted index representing the 2,000 smallest companies in the Russell 3000 index, representative of the US small capitalization securities market. **NAREIT Equity Index** is comprised of real estate investment trusts which own or have an equity interest in rental real estate (rather than making loans secured by real estate collateral). REITs involve risk, including the loss of principal and the possible lack of liquidity. **Morgan Stanley Capital International** (MSCI) All Country World Index (ACWI) is a market capitalization weighted index designed to provide a broad measure of equity-market performance throughout the world.**MSCI EAFE Index** is a market capitalization-weighted index of the leading stocks in Europe, Australasia and Far East. Membership of the index is selected by MSCI and designed for leading stocks roughly to match market sector weights. The **MSCI Emerging Markets Index** is an index created by Morgan Stanley Capital International (MSCI) that is designed to measure equity market performance in global emerging markets. It is a float-adjusted market capitalization index that consists of indices in 21 emerging economies: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Morocco, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey. The **MSCI Frontier Markets Index** provides broad representation of the equity opportunity set while taking investability requirements into consideration within each market. MSCI classifies 34 countries as Frontier Markets, 26 of which are included in the MSCI Frontier Markets Index. The **STOXX Europe 600 Index** is derived from the STOXX Europe Total Market Index (TMI) and is a subset of the STOXX Global 1800 Index. The **CAC 40 Index** is a benchmark French stock market index. The index represents a capitalization-weighted measure of the 40 most significant values among the 100 highest market caps on the Paris Bourse (now Euronext Paris). The **DAX Index** is a blue chip stock market index consisting of the 30 major German companies trading on the Frankfurt Stock Exchange. The **FTSE 100** is a share index of the 100 companies listed on the London Stock Exchange with the highest market capitalization. The **DJ Asia-Pacific Index** represents the leading stocks by dividend yield traded in the Asia/Pacific region.

The **Nikkei Index** is a stock market index for the Tokyo Stock Exchange (TSE). The **Shanghai Composite Index** is a stock market index of all stocks (A shares and B shares) that are traded at the Shanghai Stock Exchange. **S&P BSE Sensex index**, is the benchmark index of the Bombay Stock Exchange (BSE). It is composed of 30 of the largest and most actively-traded stocks on the BSE, providing an accurate gauge of India's economy. The **BM&F Bovespa**, also known as the Sao Paul Stock Exchange, is Brazil's stock exchange. It is the third largest stock exchange in the world by market value with over 500 companies traded on the exchange. The IBOVESPA is an index of about 50 stocks and is the main indicator of the Brazilian stock market's average performance. **S&P/TSX 60 Index** is a stock market index of 60 large companies listed on the Toronto Stock Exchange. Maintained by the Canadian S&P Index Committee, a unit of Standard & Poor's, it exposes the investor to ten industry sectors. **S&P/BMV IPC Index** seeks to measure the performance of the largest and most liquid stocks listed on the Bolsa Mexicana de Valores. The index is designed to provide a broad, representative, yet easily replicable index covering the Mexican equities market. The constituents are weighted by modified market cap subject to diversification requirements. In exchange for greater growth potential, investments in foreign securities can have added risks. These include changes in currency rates, economic and monetary policy, differences in auditing standards and risks related to political and economic developments. The **S&P Global BMI (Broad Market Index)** comprises the S&P Developed BMI and S&P Emerging BMI, is a comprehensive, rules-based index measuring global stock market performance. **Barclays Aggregate Bond Index** is made up of the Lehman Brothers Government/Corporate Bond Index, Mortgage-Backed Securities Index, and Asset-Based Securities Index, including securities that are of investment grade quality or better, have at least one year to maturity, and have an outstanding par value of at least $100 million. The **Barclays Municipal Bond Index** is a market value weighted index of investment grade municipal bonds with maturities of one year or more. The **Barclays Capital US Government Inflation-Linked Bond Index** (US TIPS) measures the performance of the TIPS market. TIPS form the largest component of the Barclays Capital Global Inflation-Linked Bond Index. Inflation-linked indices include only capital indexed bonds with a remaining maturity of one year or more. Treasury notes (T-notes) are intermediate securities with maturities of 1 to 10 years. Denominations range from $1000 to $1 million or more. The notes are sold by cash subscriptions, in exchange for outstanding or maturing government issues, or at auction. **Barclays Capital Global Aggregate ex-U.S. Index** measures the performance of the global bond market, excluding U.S. securities. **Bloomberg Commodity Index:** is a world-production weighted total return index, including reinvested dividends, measuring investor returns from a fully-collateralized commodity futures investment. Due to market fluctuation, the commodities represented by this index may experience loss of invested principal and are subject to investment risk. An exchange-traded fund (**ETF**) is a security that tracks an index, a commodity or a basket of assets like an index fund, but trades like a stock on an exchange. Indexes are unmanaged and investors cannot invest directly in an index.

Morningstar Category Returns are composed of the average return for the funds in each Morningstar category over the indicated time period. Categories are defined by Morningstar based on holdings statistics. The category returns are adjusted for survivorship bias, meaning they include all investments even if liquidated, merged or otherwise now obsolete. The returns also include funds that were in a given Morningstar category, but have since changed to another category.
